CHARAN PAIPOTI

AI ENGINEER | SOFTWARE ENGINEER | PALANTIR FOUNDRY & AIP

Palantir Certified Associate AI Engineer

607-339-1105 | charanpaipati@gmail.com | linkedin.com/in/charan

SUMMARY

AI Engineer with 4+ years across software engineering, data engineering, and applied AI. Built production claims intelligence on Palantir Foundry and AIP, reducing case review time 90% (50 to 5 minutes). Combined Python, SQL, TypeScript, Ontology-driven workflows, RAG, and LLM evaluation to deliver document intelligence and decision support. Automated reporting to shorten cycles 65% and translated technical findings into actionable outcomes for business stakeholders.

EXPERIENCE

Palantir AI & Data Engineer | AIG | Atlanta, GA **Mar 2026 – Present**

- Engineered AI features for Claims Assist supporting North America Casualty claims; developed TypeScript in Code Repositories and published versioned Foundry functions consumed by the application.
- Built and deployed AIP Logic document summarization, surfacing policy-specific snippets, plaintiff/defendant details, and case overviews in document-level pop-ups for adjusters.
- Reduced case review time from ~50 to ~5 minutes (90%), providing policy terms and case context upfront to accelerate adjudication and improve review consistency.
- Developed document criticality detection for trial dates and legal information; surfaced critical notes in the document panel to expose time-sensitive items without opening every file.
- Integrated claim, document, and document-type configuration objects through Foundry Ontology; enabled document-class controls through configuration and validated scope, classification, and LLM outputs with end-to-end AIP Logic tests.
- Root-caused hidden-character mismatches that excluded injury documents from summarization; fixed Send Documents selection logic to send only selected files, partnering with engineers on debugging and knowledge sharing.

Ananda AI | Cryptocurrency Trading Chatbot | UConn Master's Capstone **2024 – 2025**

- Built a Python RAG chatbot using LLaMA 3.1 8B and Mistral 8B models from Hugging Face; retrieved financial PDFs, curated documents, and web context through vector embeddings and semantic search to answer cryptocurrency and investment questions.
- Designed candlestick-based entry/exit guidance with market-movement explanations; tested trend-following and mean-reversion strategies on minute-level BTC/ETH data against a 20% maximum drawdown target.

Data Analyst | University of Connecticut | Storrs, CT **Oct 2023 – May 2025**

- Engineered SQL queries and Excel workforce-allocation models, improving operational efficiency 20%; built Tableau-ready datasets and dashboards for executive budget-utilization reporting.
- Validated reporting pipelines across 20+ departments, resolving anomalies to support 100% month-end reporting reliability; reduced reporting cycles 65% through automated collection and documented data definitions.

Software Engineer | Tata Consultancy Services | State Bank of India **Mar 2022 – Aug 2023**

- Maintained predictive models and production automation bots; monitored and troubleshot data inputs/outputs to sustain model performance and 83% reporting accuracy.
- Applied advanced SQL in enterprise analytical environments comparable to Snowflake to investigate risk patterns and fraud cases, contributing to a 20% improvement in strategic business planning.
- Partnered with Product and Operations to track KPIs and resolve 1,000+ monthly service requests; assessed automation feasibility, delivered $18,000 in operational savings, and built Power BI/Tableau reports for leadership.

SKILLS

Generative AI: RAG, LLM workflows, prompt engineering, vector embeddings, semantic search, document intelligence, context grounding, LLM output evaluation, Hugging Face, LLaMA, Mistral

Palantir: Foundry, AIP Logic, Ontology, Code Repositories, versioned TypeScript Functions, Object Explorer, configuration-driven AI workflows

Software & Data: Python, SQL, PySpark, TypeScript, R, data/feature pipelines, feature engineering, Git, CI/CD, end-to-end testing, root cause analysis

Cloud & Analytics: AWS, Azure, UiPath, ServiceNow, Power BI (DAX), Tableau, SAS, JMP, Advanced Excel

Delivery: Agile, Scrum, SDLC, requirements gathering, UAT, process optimization, cross-functional collaboration

EDUCATION & CERTIFICATIONS

Master of Science, Business Analytics and Project Management | University of Connecticut, Storrs, CT | May 2025

Palantir Associate AI Engineer | Oct 2026 • Palantir Foundry Aware | Oct 2026
